Visual identity guidelines · Version 1.2 · October 2026

The Codest

In code we trust

ABOUT THIS DOCUMENT

The identity as it exists today

A light, calm page in white and pale tints, with deep navy for headings and one loud accent, pink, for every action. Headings and buttons use a heavy, wide monospaced face that says "engineers". Body text uses a plain humanist sans. Corners are always square. The signature detail is a thin pink outline set 4px behind every button. Fine line-waves sit in the background as texture.

This is a record of what is there, not a new direction. Where something breaks accessibility or the 2026 brand strategy, it is flagged and left as it is.

Source

The current website design file in Figma: every page in desktop (1440px) and mobile (375px). Colour and type values come from the file's own variables. Component specs come from the file's button, tag and input layers. A few measurements were read from frame positions or screenshots and are marked as such.

What this does not cover

Words. Copy, claims and tone live in the content guide. Several headlines in the Figma mockups break that guide; see Things to fix.

Where the files are

Everything shown here is in the brand repository: tokens, fonts, logo, icons, wave textures and components under **design-system/**, and these guidelines as Markdown under **visual-identity/**.

LOGO

The wordmark

Black on white and the pale tints (fill #231F20, as drawn). **White** on navy and dark photo heroes. Files: design-system/assets/logo/.

THE C0DEST, with a zero for the O, over the strapline IN CODE WE TRUST in small spaced capitals.

- Use the files as they are. Never retype the wordmark, recolour it to pink or purple, add effects or separate the strapline.
- On the site: 144 × 36px, at the left content edge of the header.
- The file sets no minimum size or clear space. Recommended until decided: at least 96px wide, and the strapline's height clear on every side.
- There is no navy logo and no standalone mark or favicon in the file. Do not create one.

COLOUR

Two primaries, one accent

Navy

primary-navy · #0D124C
RGB 13 18 76. Headings, dark bands (stats, testimonials, footer), selected states.

Pink

primary-pink · #F2096E
RGB 242 9 110. The only action colour: buttons, links, active tab. Rationed: one pink action per view.

White

primary-white · #FFFFFF
Page background, text on navy and pink.

Text

#3E4070
complementary-text. Body copy.

Purple

#B87DFF
complementary-purple. Text on navy only; line work on light.

Orange

#FF584D
complementary-orange. Defined, barely used.

Light blue

#F6F7FF
Pale section background.

Light pink

#F6F1FB
Pale section background.

Peach

#FFF2F1
tint-peach. Case study panel (measured).

Border

Navy at 15%
border-subtle. Inputs, tags, dividers.

Sections alternate between white and the two pale tints. Navy is reserved for a few full-width bands. Purple appears as text only on navy.

Contrast, checked by calculation

Pair	Ratio	WCAG 2.2
Navy on white	17.4:1	Pass
Body text #3E4070 on white	9.7:1	Pass
White on navy	17.4:1	Pass
Purple on navy	6.1:1	Pass
Orange on navy	5.6:1	Pass
Pink on white, white on pink	**4.17:1**	**Fails for normal text.** Passes large text and borders
Pink on the pale tints	3.75 to 3.90:1	Fails for normal text
Orange on white	3.1:1	Fails for text
Purple on white	2.8:1	Decorative only

Why pink matters most. Pink carries every button and link. Button labels are 16 to 18px heavy, just under the "large bold text" threshold of 18.66px, so strictly they fail AA.

This is how the site is built today and is recorded as is. A fix (a slightly darker pink for text and fills) is a decision for the brand owners.

Rules that follow from this

- Keep pink text on white, never on the pale tints.
- Use purple and orange as text only on navy.
- Body copy is always navy or #3E4070.

TYPOGRAPHY

Two families

DISPLAY

Aa 0123

Iosevka Heavy Extended, 900

Headings, buttons, navigation, text links and stat numbers. A monospaced face built for code. Buttons and links are always uppercase.

The file bundled with this system is Iosevka Heavy at standard width; the Extended cut is not published as a ready web font. Samples here are slightly narrower than the live site.

BODY

Aa 0123

Fira Sans, 400 / 500 / 700, italic

All running text, cards, tags, inputs, captions and the footer. Italic is used only for client quotes.

Available free from Google Fonts. Included in the repository with Polish characters.

TYPOGRAPHY

The scale

display-xl 46px / 1.35 · Hero H1, stats	Let's talk
display-lg 36px / 1.35 · Section headings	How we help
display-md 28px / 1.35 · Case studies	Latest content
display-sm 22px / 1.35 · Cards, footer	Front-end Developer
display-xs 16px / 1.5 · Form labels	Services you need
button-big 18px · uppercase	CONTACT US
button-small 16px · uppercase	SUBSCRIBE

text-lg 20px / 1.5 · regular, bold	A team that joins yours
text-md 16px / 1.5 · regular	Default body text
text-md-bold 16px / 1.5	**Value labels**
text-md-italic 16px / 1.5	*Client quotes only*
text-sm 14px / 1.4 · regular, medium	Cards, tags, inputs, footer links
text-sm-bold-uppercase 14px · 0.5px tracking	**E-COMMERCE**
text-xs 11px / 1.5	Consent and legal lines only

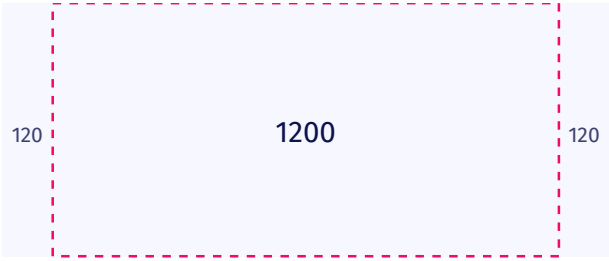

LAYOUT

Grid, spacing, shape

Grid

Desktop frame 1440px with a 1200px content column, so 120px side gutters. Mobile frame 375px with 16px gutters.

120px between sections on the Home page, every time.

Spacing inside components

Steps were set per component, not on a general grid.

8 tag padding · 10 small button · 13 input · 15 tag gap · 16 inset and mobile gutter · 20 small button sides · 40 big button sides

Shape

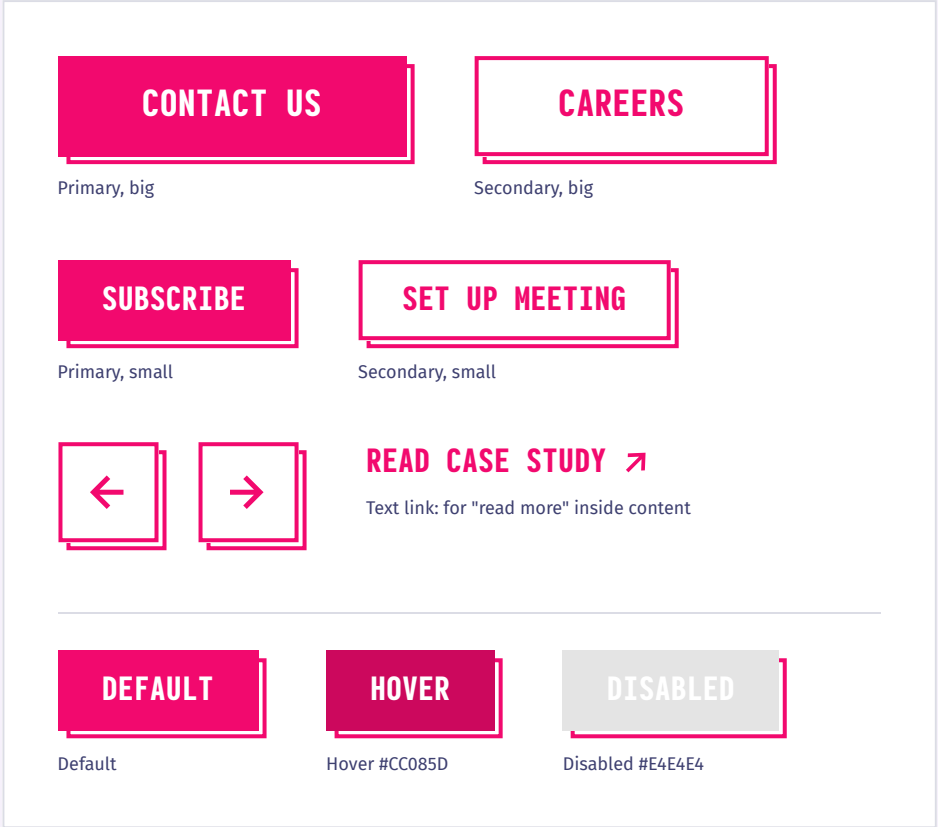

- **Square corners** on every button, tag, input and card. No rounded radius exists.
- **One stroke weight:** 2px.
- **One shadow:** 4px 4px 30px at 8% black, for blog and job cards.

SIGNATURE

The offset outline

Every pink button and every slider arrow has a second 2px pink outline drawn 4px right and 4px down, behind it. It reads like a print misregistration, and after the logo it is the most recognisable detail on the site.

- The outline is never filled, never another colour, never offset in another direction.
- Primary: pink fill, white uppercase label. One per view.
- Secondary: white fill, pink label and border. The second action beside a primary.
- Big: 18px label, 40px sides, 50px tall. Small: 16px label, 20px sides, 40px tall.
- Hover and pressed turn button and outline darker pink (#CC085D, white on it passes AA); pressed drops the outline. Disabled is all grey.

COMPONENTS

Tags, fields, stats, quotes

Tags

All | **Culture** | Product design | News

2px subtle border, 8 by 16px padding. Selected: navy fill, white medium label. 15px apart.

Inputs

E-mail

name@company.com

2px subtle border, 13 by 16px padding, 14px Fira Sans in navy. Label above in medium 14px.

Inputs also have focus, error (#D41515 message) and disabled states. The design system has 70 components; all are rendered in design-system/examples.html.

Stats strip

00+ Sourced claim

00+ Sourced claim

Only numbers that are in the claims register.

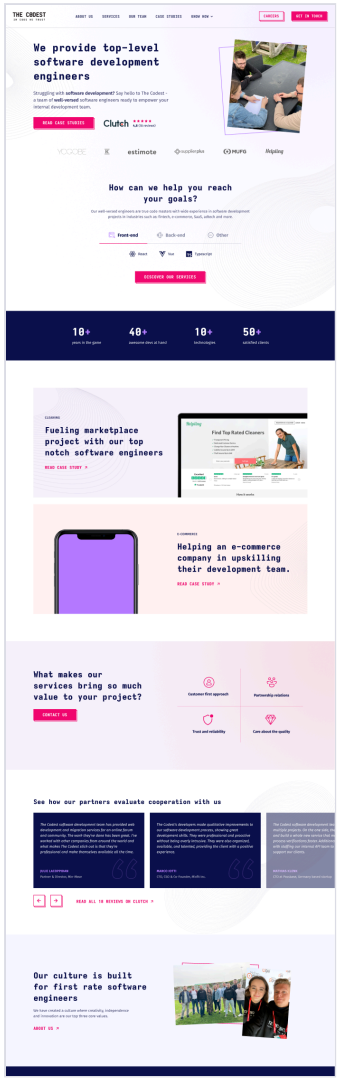

Testimonial card

Placeholder quote. Use a client review only once reuse and attribution are cleared.

CLIENT NAME
Role, Company

PAGE SECTIONS

How pages are put together

Home (Figma)

Service page (Figma)

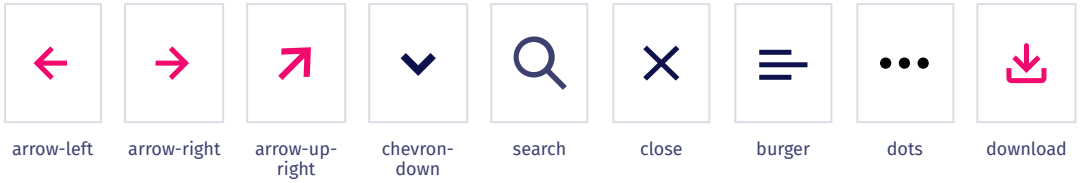

Every page is a stack of full-width sections that alternate white and a pale tint, with a few navy bands for contrast. The design system builds each of these as a ready component, and two templates show the order used on the Home and service pages.

Section	Where it appears
Header, mobile menu, footer	Every page
Home hero / navy page hero / case study hero	Top of every page
Service tabs, values grid, process	Home, services
Stats band, client stories, team quotes	Navy bands
Case study panel, image and text, opinion	Home, services, about
Testimonial and content carousels	Home, services
Banner, light banner, closing CTA band	Before the footer, mid-page
Listings, pagination, article layout	Blog, webinars, meetups, resources
Forms, side panel, timeline, perks	Contact, careers, jobs

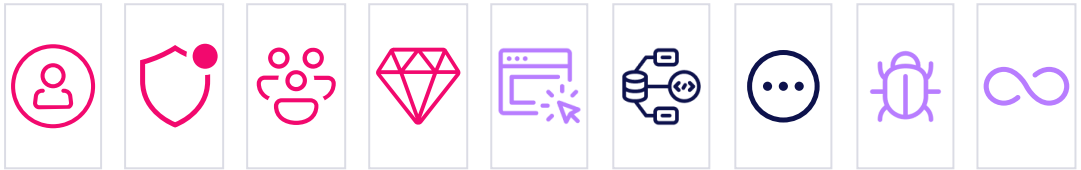

Specs and props: design-system/README.md. Templates: design-system/templates/. Screenshots of all 19 Figma pages: design-system/reference/.

Icons

Interface

Values and services

Solid fills or an even line weight, no duotone, no gradients. Use them at their drawn size or exact multiples.

- **Pink** for actions and status (arrows, download, check, play).
- **Navy** for interface controls (search, close, burger, chevron).
- **Purple** on navy (the footer pin) and for some service icons.
- **Values:** pink, 50px. **Services:** purple or navy, 30 to 40px.

Files: design-system/assets/icons/ (24 SVG, 3 service icons as 4x PNG). Technology logos, Clutch and social icons appear on the site but are third-party marks and are not part of the brand.

Texture, people, product

Line waves

Large organic shapes made of dozens of thin concentric lines in a very light navy or purple tint, bleeding off the edges of hero and contact sections. Texture only: always behind content, never behind body text at full strength.

Shown above at their on-site strength, which is deliberately faint. Files: design-system/assets/patterns/ (transparent PNG). Vector originals stay in Figma.

Colour orbs and gradient

Soft purple or orange orbs sit half off a section edge, at most two per section. The one gradient (orange to purple) is only for the bar on pull quotes and the areas-of-expertise graphic.

Brand gradient, as the pull-quote bar

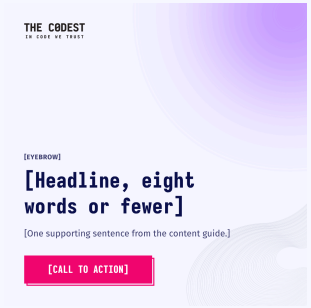

Product and icons

Real team photos, never stock, in tilted frames. Case studies show the client's product in a laptop or phone frame on a pale tint panel.

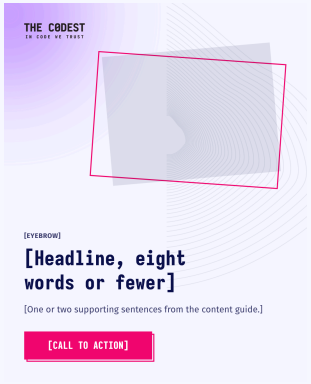

Icons are thin pink line drawings (person, people, shield, diamond for the values) and small single-colour technology marks.

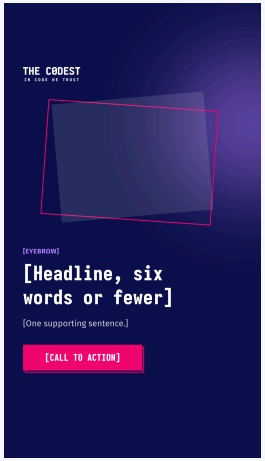

CREATIVES · PROPOSED

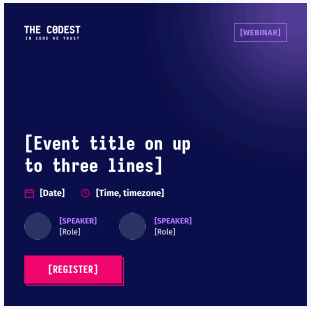

Social, ads, covers, email

Twelve image templates apply the identity to social posts, stories, link images, article covers, event promos, quote cards, the LinkedIn banner, email headers and three display ad sizes. A render script fills them with copy and exports PNGs, and warns when copy is too long.

Proposed: the Figma file has no creatives, so these rules extend the website identity and need brand-owner sign-off. Files: creatives/.

- One idea: eyebrow, headline, one sentence, one action.
- Logo top-left, supplied file only; about 6.5% safe margin.
- Navy display headline, short; pink only on the button.
- One wave, at most two orbs, behind content and off an edge.
- Real photos in the tilted frame; copy and numbers from the content guide.

BEFORE REUSE

Things to fix, found in the current file

1. **Pink fails text contrast** at 4.17:1 (page 5).
2. **MUFG logo** in the Home page client strip. Blocked from any public use until written consent exists.
3. **Mockup copy breaks the content guide:** "top-level", "top notch", "true code masters", "awesome devs", "empower".
4. **Unsourced numbers** in the stats strips ("10+", "40+", "50+", "80%", "100+ partners", "15 countries") and the Clutch rating are not in the claims register.
5. **Placeholder duplication:** seven identical job cards, repeated contact-card text.
6. **Real client quotes** from Clutch in testimonial cards need consent and attribution checks.
7. **Copyright line** reads 2022.

Gaps in the source file

- Iosevka Extended font file (standard width bundled).
- No standalone mark, favicon, navy logo or dark theme.
- No focus state (an accessible focus ring was added).
- Large wave artwork supplied as PNG; vectors stay in Figma.
- No photography bundled.
- Creative rules are proposed, pending sign-off.
